## SYNOPSIS

The project titled Development Of Research Paper Management Portal System is a management software for monitoring and controlling the uploading and downloading the paper. The project Development Of Research Paper Management Portal System system is developed in php. Which mainly focus on the operations like adding a new paper, searching paper and admin have the access to view all the papers that have been inserted.

This system can run on any operating system. Designed to help users or admin to maintain the papers. Our software is easy to use both user and admin. It features are user friendly like an attractive user interface, combined with storing, searching, inserting a paper.

The Development Of Research Paper Management Portal System system has four main modules: Insertion to database module - User friendly input screen. Extracting from Database module - Attractive output screen Search facility system – search papers these days, a lots of research papers are stored on computers and servers using database which can be easily accessible to users at any place as long as they get permission to view the documents. The front end of the system would contain HTML 5, CSS 3 along with bootstrap. The middleware will be the PHP and the database would be MySQL/MongoDB.

Development Of Research Paper Management Portal System will be able to provide a computerized system for the management of research papers. This system would also provide reports of the research papers downloaded and viewed . The organization can keep track of their research paper with respect to the field, the authors etc.
